

# OpenLink Virtuoso

Adam Polický

# OpenLink Virtuoso

- Modern multi-model RDBMS for managing data
  - tabular relations (Tables)
  - RDF sentence collections (Graphs)
- High-performance
- Scalable
- Secure
- Open
- Standards-based

# More than a DBMS

- O-RDBMS
  - SQL
  - XML
  - RDF
- Web application server
- Web services platform
  - soap/rest

# Installation

- Commercial and open-source version
- Docker
  - Image on docker hub
  - Free demo - however, after 10 minutes freezes and needs to be restarted
- Package manager
  - `sudo apt install virtuoso-opensource`
- Pre-built packages for Windows

# Virtuoso APIs

- Both client and server APIs for system integration
- Examples
  - ADO.NET
  - JDBC
  - RDF4J API
  - RESTful HTTP API
  - SOAP webservices
  - XPath
  - XQuery
  - XSLT

# GUI that can be opened in a web browser

- System administration
- Database management
  - Interactive SQL, overview of tables
- XML
  - SQL-XML, XQuery, XSLT
- Linked Data
  - RDF, relational data -> rdf conversion
- Web Server
- Web services

-  Interactive SQL (ISQL)
-  WebDAV Browser
-  Virtuoso Start Menu

# Relational data

- Traditional RDBMS
- Interactive SQL
- Visual browsing
  - database
  - schema
  - table
    - indexes, triggers, constraints
- CSV Export

# SQL Create table

```
CREATE TABLE DB.FARM.WORKERS (  
    WorkerID int PRIMARY KEY,  
    Name varchar(255),  
    Position varchar(255),  
    Since date  
);
```

# SQL Insertion

```
INSERT INTO DB.FARM.WORKERS (WorkerID, Name, Position, Since) VALUES (1,  
'John Doe', 'Farm CEO', '2001-03-04');
```

```
INSERT INTO DB.FARM.WORKERS (WorkerID, Name, Position, Since) VALUES (2,  
'Bob', 'Animal Caretaker', '2010-09-23');
```

```
INSERT INTO DB.FARM.WORKERS (WorkerID, Name, Position, Since) VALUES (3,  
'Alice', 'Accountant', '2013-05-14');
```

```
INSERT INTO DB.FARM.WORKERS (WorkerID, Name, Position, Since) VALUES (4,  
'Earl', 'Plower', '2006-01-03');
```

```
INSERT INTO DB.FARM.WORKERS (WorkerID, Name, Position, Since) VALUES (5,  
'Carl', 'Picker', '2018-12-04');
```

# SQL Query

```
SELECT WorkerID AS id, Name, Position
FROM DB.FARM.WORKERS
WHERE Since < '2018-12-31'
ORDER BY Since ASC
```

# XML documents

- XML documents can be stored on the web server
- XSLT transformation
- XQuery over the data
- SQL - XML Query

# XSLT

```
<xsl:stylesheet>

  <xsl:template match="/">

    <html>

      <body>

        <h2>My CD Collection</h2>

        <table border="1">

          <tr bgcolor="#9acd32"> <th>Title</th> <th>Artist</th> <th>Price</th> </tr>

          <xsl:for-each select="catalog/cd">

            <xsl:if test="price > 10">

              <tr>

                <td><xsl:value-of select="title"/></td>

                <td><xsl:value-of select="artist"/></td>

                <td><xsl:value-of select="price"/></td>

              </tr>

            </if>

          </for-each>

        </table>

      </body>

    </html>

  </template>

</xsl:stylesheet>
```

# XQuery example

```
for $x in doc("books.xml")/bookstore/book
where $x/price>30
order by $x/title
return $x/title
```

# SQL-XML Query

```
SELECT WorkerID AS Id, Name, Position  
FROM DB.FARM.WORKERS AS Worker
```

```
<Workers>  
  <Worker Id="1" Name="John Doe" Position="Farm CEO" />  
  <Worker Id="2" Name="Bob" Position="Animal Caretaker" />  
  <Worker Id="3" Name="Alice" Position="Accountant" />  
  <Worker Id="4" Name="Earl" Position="Plower" />  
  <Worker Id="5" Name="Carl" Position="Picker" />  
</Workers>
```

# Linked Data

- RDF file upload
- Possibility to publish linked data via SPARQL endpoint
- You can save your own namespaces
- Role management for graphs

# Linked Data 2

- RDF data upload
  - from local file
  - from url
- Publishing on a sparql endpoint

<http://localhost:8890/sparql>

```
SELECT *  
WHERE {  
    ?s ?p ?o .  
}  
LIMIT 15
```

# RDF Triples

```
<https://www.praha11.cz/zdroj/vzacnystrom/> rdfs:type lgdo:Tree .

```

# Relational data can be converted to RDF

- linked data -> views -> generate mapping
- RDF data then can be published on a sparql endpoint
- Change in relational data can be seen on the published rdf data

<http://localhost:8890/DB#>

```
SELECT * WHERE { ?s ?p ?o . } LIMIT 30
```

```
SELECT DISTINCT ?s ?p1 ?o2  
WHERE {  
  ?s rdfs:type lgdo:Tree .  
  ?s ?p1 ?o2 .  
}
```
